## Subject index to volume 31

Application protocol	223	Lifetime prediction	85
Artificial intelligence	45	Logistics software	31
Automated manufacturing	61	Logistics support	235
Automatic code generation	61	Machining constraints	99
Automotive industry	223	Main suppliers	223
Automotive suppliers	255	Manufacturing	99
Batch processing	61	Manufacturing data management	293
Bill of material	31	Materials engineering	85
Bills of materials	293	Metamodel	255
Branch and bound algorithm	155	Modelling techniques	143
Business process modelling	143	NC tool path generation	129
CACDS	1	Object-oriented database	305
CAD	129	Object oriented modeling	85
CAM	129	Open control systems	1
CNC	45	Process control	15
Co-makership	223	Process planning	99
Computer architecture	15	Product breakdown structure	281
Concurrent engineering	143	Product data engineering	293
Configuration	281	Product data management	195
Control modeling	61	Product data models	235
Cyclide surfaces	129	Product development	223
Data model	31	Product family classification tree	281
Data modeling	305	Product processes	195
Digital control	1	Real-time control	1
Dispatching rules	155	Re-engineering	143
Distributed computer systems	15	Reference model	31
Engineering document management	195	Routings	293
Feature-based design	99	Schema visualizer	305
Feature composition	99	Ship pre-design process	143
Feature refinement	99	Simulated annealing	175
Generic product structure	281	Simulation	1
Genetic algorithm	155	Software development methodology	61
Grinding	45	Software selection	31
Industrial automation	15	Standard software package	31
Industrial design engineering	255	STEP	223, 235
Information processing	85	STEP/EXPRESS	305
In-service configuration control	235	Suppliers	223
Job shop scheduling	155	Tolerance analysis	175
Knowledge based systems	85	Tolerance representation	161
		Tolerance specification	161
		Tool selection	99
		TTRS	161, 175
		Virtual pocket	99
